

dbx CT2 Quick Start

1. Install a 9 Volt battery (sold separately) in the bottom of the CT2 chassis. Turn the knob to the *BATTERY CHECK* position to test the battery.
2. Connect a cable to test (see diagram on right).

NOTE: When testing a cable with banana connectors, the yellow LED will light and a test tone will be audible if the cable passes continuity.

3. Turn the knob to select the cable pin to test (see screening on chassis for PIN reference). The LED pair for the selected pin will light if the cable passes. If an LED for an unselected PIN lights, this indicates a short is made between the selected and indicated PIN.
